“The ability to record such high resolution usage data is very valuable for Richmond Dairies”

Eutility's Mission

Ensuring customers recover all potential overcharges, receive the lowest forward cost the market can bear and, over the period of our agreement, guarantee our customers pay the lowest price for electricity, natural gas and telecommunications. That is, complete elimination of the risk of overpayment.

About Eutility

Eutility is wholly Australian owned company. Providing corporate energy and telecommunications cost management solutions to Australian and International companies since 1979, we are pleased to have assisted more than 50,000 organisations to reduce their bottom lines.

Eutility operates in every state of Australia and through our ability to consistently provide quality savings for our customers, we have built an ongoing client base of over 3,000 businesses in over 11,000 locations in Australia and internationally.

Testimonials:

A Letter From Richmond Dairies

Richmond Dairies has been using Eutility's SmartEnergy system to monitor our site's electricity use over the past few months.

The ability to record (and export to MS Excel) such high resolution usage data is very valuable for us. Previously, I looked at our monthly energy use and monthly production records to monitor plant efficiency. Being able to have daily use allows me to monitor very closely what is going on, and whether energy reduction measures are performing as well as they should.

The only problem I have now is that the resolution of our production records isn't good enough to match the electricity data!

It is also very valuable for me when it comes to applying for any grants or assistance for energy reduction projects.

Rather than have to start data in readiness for submitting an application, I can simply log in and all the information is ready to go.

Also, the addition of an ambient temperature log is helpful for a site such as ours where refrigeration accounts for a large proportion of our electricity use.

It is a very impressive tool for engineers who are concerned about electricity use.
